Investment Signals

Monthly monitoring of investment signals across 77 target companies

30 major investment promotion projects · 77 target companies selected by MOTIR

5 key investment signals tracked per company · Pre-decision signals only

The 5 Key Investment Signals

1 **Supply Chain & Political Risk Management**

Reducing regional dependency, diversifying supply chains, and addressing regulatory risks

2 **Factory Expansion & Diversification of Production Bases**

New factory opening or facility construction in the Asia-Pacific (APAC) region

3 **Capital Raising & Securing Liquidity**

Getting extra cash by issuing corporate bonds, new share issuance, or bank loans

4 **Tech Partnerships & Joint Research**

Joint R&D, sharing tech licenses, testing new ideas, or buying shares in partner companies

5 **Top Executives' Activities**

C-level executives moving to new positions, business trips to Korea, or checking out local business sites

Signal Details by Company

Applied Materials

Semiconductor Equipment | USA

1	Supply Chain & Political Risk Management	No signal in October
2	Factory Expansion & Diversification of Production Bases	No signal in October
3	Capital Raising & Securing Liquidity	No signal in October
4	Tech Partnerships & Joint Research	Applied Materials entered into an accelerated share purchase agreement to increase its investment in BE Semiconductor Industries to approximately 20 percent of outstanding shares, with share delivery subject to the expiration or termination of the applicable HSR Act waiting period. Source: Press release · Applied Materials Oct 26, 2026
5	Top Executives' Activities	No signal in October

Business Developments

1. Applied Materials unveiled its Equipment and Process Innovation and Commercialization (EPIC) Center in Silicon Valley, the world's largest facility dedicated to collaborative semiconductor process technology and manufacturing equipment R&D, alongside 15 partnerships. The company also expanded its manufacturing infrastructure in Austin, Texas, Singapore, and Treviso, Italy.
   Source: Press release · Applied Materials Oct 13, 2026
2. Applied Materials and Besi are advancing hybrid bonding technology for next-generation AI systems, combining Besi's expertise in precision die-to-wafer bonding with Applied's leadership in front-end processing to enable future high-performance 3D integrated devices.
   Source: Press release · Applied Materials Oct 12, 2026
3. Applied Materials is working with Intel Corporation to accelerate the development of chipmaking innovations for next-generation transistors, interconnects, and advanced packaging technologies.
   Source: Press release · Applied Materials Oct 6, 2026

Signal Details by Company

ASML

Lithography Equipment | Netherlands

1	Supply Chain & Political Risk Management	No signal in October
2	Factory Expansion & Diversification of Production Bases	ASML is investigating ways to increase capacity for 2028 beyond the 30% increase it previously forecast. Source: CNBC Oct 14, 2026
3	Capital Raising & Securing Liquidity	No signal in October
4	Tech Partnerships & Joint Research	No signal in October
5	Top Executives' Activities	No signal in October

Business Developments

Target technology **EUV lithography systems**

1. In the third quarter, ASML reported record total net sales of €11.7 billion, supported by the sale of 113 new lithography systems. Installed Base Management sales reached €3.3 billion due to strong demand for productivity upgrades.
   Source: Press release · ASML - ASML News / Newsroom / News Oct 14, 2026
2. ASML Holding announced plans to expand low-NA EUV and immersion DUV capacity by 30% in 2027 and another 30% in 2028.
   Source: Morningstar Oct 14, 2026
3. Researchers at Carl Zeiss SMT and ASML published a technical paper titled “Hyper-NA: a system with a numerical aperture of at least 0.75,” examining Hyper-NA EUV lithography with a numerical aperture of at least 0.75 as a path beyond current 0.55-NA High-NA systems.
   Source: Semiconductor Engineering Oct 7, 2026

Signal Details by Company

BESI

Advanced Packaging Equipment | Netherlands

1	Supply Chain & Political Risk Management	No signal in October
2	Factory Expansion & Diversification of Production Bases	No signal in October
3	Capital Raising & Securing Liquidity	No signal in October
4	Tech Partnerships & Joint Research	

Besi joined Applied Materials' EPIC Center as an Innovation Partner to expand their collaboration targeting next-generation 3D IC scaling, logic and memory integration, thermo-compression bonding scaling, and new integration platforms.

Source: Press release · Besi - Press Releases Oct 27, 2026

5	Top Executives' Activities	No signal in October

Business Developments

Target technology **High-precision wafer-to-wafer (W2W) hybrid bonding equipment**

Tata Electronics and Dutch semiconductor assembly equipment supplier Besi signed a memorandum of understanding to develop advanced semiconductor packaging capabilities in India. Under the agreement, Tata Electronics will evaluate Besi's advanced packaging equipment and technologies for the facility.

Signal Details by Company

Norsk Hydro

Non-Ferrous Metals & Recycling | Norway

1	Supply Chain & Political Risk Management	No signal in October
2	Factory Expansion & Diversification of Production Bases	No signal in October

3 Capital Raising & Securing Liquidity

Enova granted an additional NOK 82 million to Hydro for the development of the project's next phase, an industrial concept pilot for HalZero.

Source: Norsk Hydro - News / Newsroom Oct 19, 2026

4 Tech Partnerships & Joint Research

In the Siemens Mobility-led Train2Train pilot, aluminum recovered from decommissioned trains will be recycled at Hydro's facility in Ghlin, Belgium, and processed into new extrusion billets to produce rail components at Hydro's extrusion facility in Harderwijk, the Netherlands.

Source: Norsk Hydro - News / Newsroom Oct 6, 2026

5	Top Executives' Activities	No signal in October

Business Developments

Target technology **Maximizing recycled (scrap) content in non-ferrous metal production**

1. Hydro experienced continued momentum for its low-carbon and recycled products, with leading brands like CHANEL Fragrances and Beauty, General Motors, and Mercedes-Benz integrating Hydro's solutions in their product lines.

   Source: Norsk Hydro - News / Investor News Oct 23, 2026

2. Stena Recycling sorted recovered aluminum scrap before supplying it to Hydro for recycling. Hydro processed the material at its facilities in Sweden, casting it into extrusion ingots at its Sjunnen casthouse before transporting it to its extrusion plant in Finspång.

   Source: AL Circle Oct 12, 2026

3. Hydro reached an annual post-consumer aluminum scrap recycling capacity of around 850,000 tonnes by the end of 2025 and is investing EUR 180 million in a new recycling plant in Torija, Spain. The facility will have an annual production capacity of 120,000 tonnes and will be able to process up to 70,000 tonnes of post-consumer aluminum scrap.

Signal Details by Company

Vestas

Offshore Wind Turbines | Denmark

1 Supply Chain & Political Risk Management

Vestas signed an agreement with Japan's Ministry of Economy, Trade and Industry to advance a domestic wind turbine manufacturing base, setting the groundwork for a nacelle assembly facility by fiscal year 2029 subject to market conditions, and signed memoranda of understanding with Nippon Express and DENZAI to reinforce Japan's logistics and installation supply chain.

Source: TGS | 4C Offshore Oct 3, 2026

2 Factory Expansion & Diversification of Production Bases

Vestas signed an agreement with Japan's Ministry of Economy, Trade and Industry to advance a domestic wind turbine manufacturing base, laying the groundwork for a nacelle assembly facility by fiscal year 2029 and outlining a long-term roadmap for a full nacelle production site in Japan by fiscal year 2039.

Source: TGS | 4C Offshore Oct 3, 2026

3 Capital Raising & Securing Liquidity — No signal in October

4 Tech Partnerships & Joint Research

Vestas signed a memorandum of understanding with Neretek to explore deploying their foundation and turbine technologies on deeper-water offshore wind projects, assessing Neretek's BC90 foundation concept alongside Vestas's turbines to support the Other Deep Water Offshore Wind segment.

Source: Offshore Wind Oct 7, 2026

5 Top Executives' Activities — No signal in October

Business Developments

Target technology **Offshore wind turbines**

1. On October 13, 2026, Vestas completed the assembly of Taiwan's first V236-15.0 MW™ offshore wind turbine hub, supporting progress on CIP's 495 MW Fengmiao 1 Offshore Wind Farm.
   Source: www.energy-omni.com Oct 13, 2026
2. Vestas has chartered Acta Marine's construction service operation vessel, Acta Hercules, for five years to support offshore wind projects across Northwest Europe. The vessel's first assignment under the contract is on the Hollandse Kust West project in the Netherlands.

Signal Details by Company

Rio Tinto

Lithium & Cathode Materials | UK

1	Supply Chain & Political Risk Management	Rio Tinto plans to invest approximately US$4 billion in growth capital across its Argentine lithium operations and expects to spend around 70 percent of it with local suppliers. Source: Investing News Network Oct 29, 2026
2	Factory Expansion & Diversification of Production Bases	No signal in October
3	Capital Raising & Securing Liquidity	No signal in October
4	Tech Partnerships & Joint Research	No signal in October
5	Top Executives' Activities	No signal in October

Business Developments

Target technology — **Cathode raw materials (lithium hydroxide, lithium carbonate)**

1. Rio Tinto officially opened its Fénix 1B expansion and Sal de Vida operation in Catamarca, Argentina, following a combined investment of around $1.4 billion. The projects achieved first production in the second quarter and will add 25,000 tonnes of annual lithium carbonate equivalent capacity once fully ramped up.
   Source: Press release · Rio Tinto Oct 29, 2026
2. Rio Tinto reported that its year-to-date lithium carbonate equivalent (LCE) production increased 33% to 40.3 kt, with third-quarter production reaching 13.0 kt despite adverse weather impacting operations. The Fenix 1B ramp-up continues to progress well, and full-year guidance remains unchanged at the lower end of 61 to 64 kt.

Signal Details by Company

HyProMag

Rare Earths & Magnet Recycling | UK

1 Supply Chain & Political Risk Management

HyProMag USA secured power capacity with Oncor Electric Delivery Company for its planned Texas rare earth magnet recycling and manufacturing hub to support a domestic US rare earth magnet supply chain.

Source: Share Talk Oct 13, 2026

2 Factory Expansion & Diversification of Production Bases

HyProMag USA completed a pre-feasibility study evaluating the potential expansion of its U.S. rare earth magnet manufacturing platform beyond its Northlake, Texas plant, which is in detailed engineering with Phase 1 commissioning expected in mid-2028.

Source: Mining.com Oct 28, 2026

3	Capital Raising & Securing Liquidity	No signal in October
4	Tech Partnerships & Joint Research	No signal in October
5	Top Executives' Activities	No signal in October

Business Developments

Target technology **High-purity rare-earth recovery from end-of-life permanent magnets**

1. HyProMag is developing advanced rare earth magnet recycling and manufacturing operations to establish a secure domestic U.S. supply chain for neodymium iron boron magnets, which are essential components for AI infrastructure, defense systems, robotics, electric vehicles, and advanced electronics.
   Source: Mining.com Oct 28, 2026
2. HyProMag USA deployed its third Spanish-made Inserma Anoia S.L. hard disk drive separation system as a mobile processing unit, strengthening its partnership with Intelligent Lifecycle Solutions and supporting the nationwide expansion of a platform for recovering and recycling rare earth magnets from end-of-life hard disk drives.
   Source: Recycling Today Oct 20, 2026
3. PegasusTSI has started a contractor-selection process for HyProMag USA's cutting and finishing facility in Texas, while Weston Solutions is progressing permitting activities.

Business Developments

Target technology **CVD silicon-carbon (Si-C) anode materials**

No related business developments found in October 2026.

Global Business Developments by Company

These companies had no signals in October but reported developments tied directly to their target technologies. Cards without a target technology cover all of a company's businesses. All are monitored for emerging signals.

Cognex

Machine Vision & Sensors | USA

Target technology

3D vision sensors

October Developments

Cognex Corporation entered an agreement to acquire RealSense for $500 million to expand into the robotic perception market.

Source: Vision Systems Design Oct 6, 2026

Qualcomm

Automotive Semiconductors | USA

Target technology

IMU, RF, and baseband chips for autonomous vehicles

October Developments

Qualcomm Technologies announced that its vehicle-to-everything (V2X) chipsets will support nearly all major regional V2X deployments worldwide through a single platform. The chipsets will support the 760 MHz ARIB-T109 standard for Japan alongside the already supported 5.9 GHz band.

Source: Qualcomm Oct 20, 2026

Ouster

Lidar & 3D Sensing | USA

Target technology

Lidar sensors for robots

October Developments

Forterra plans to advance its AutoDrive platform with Ouster REV8 native color lidar for next-generation defense vehicles as part of its expanding multi-year partnership with Ouster. Forterra's Lancer autonomous ground vehicles completed 1,426 missions and 88 casualty evacuation operations in Ukraine using Ouster Rev7 OS1 digital lidar.

Global Business Developments by Company

Syensqo

Battery Binders (PVDF) | Belgium

Target technology Polyvinylidene fluoride (PVDF)

October Developments

Syensqo has ended the production of C6O4, the last fluorosurfactant used in some fluoropolymer output at its Spinetta Marengo site in Italy. The move fulfills a 2022 pledge to phase out fluorosurfactants by 2026 following research since 2019 that enabled a new polymerization process. Nearly all its fluoropolymers are now manufactured without PFAS processing aids.

Source: ALCHEMPro Oct 30, 2026

Texcell

Biologics Safety Testing | France

Target technology Virus validation and master/working cell bank characterization

October Developments

Following its acquisition in the second half of 2026, TEXCELL provides expertise in viral safety and clearance, biosafety, and virology. On September 10, 2026, the TEXCELL division was selected by ABIONYX Pharma to conduct viral safety and viral clearance studies for process validation batches of CER-001.

Toray

Advanced Materials | Japan

October Developments

Toray Industries developed a polyester-nylon fiber containing at least 93 percent recycled content by mass based on the total weight of the raw yarn. The company created Artirosa CX incorporating the new fiber, with a product launch expected in late-2027 and initial year sales targeted at 200,000 meters of material.
