GLOBAL BUSINESS STATUS

Target item/tech

Gene/cell therapy delivery vector and GMP raw material

Moderna announced that an experimental mRNA cancer treatment passed a key test in initial study results. The treatment uses an mRNA-based cancer vaccine called intismeran designed for individual patients based on tumor mutations and is being studied in combination with Merck's Keytruda. Melanoma patients who received the combination lived longer without cancer returning or metastasizing compared to those who received Keytruda alone.
