GLOBAL BUSINESS

 Target technology

rare earth extraction from end-of-life permanent magnets

Energy Fuels completed its 100% acquisition of Australian Strategic Materials (ASM) through a scheme of arrangement on 28 August 2026. ASM was removed from the ASX official list on 31 August, with shareholders receiving new shares or CDIs and A\$0.13 per share in cash. The companies position the combination as supporting a leading Western rare earth supply chain and a secure, diversified rare earth platform. No activities or technologies for high-purity rare earth extraction from end-of-life permanent magnets are disclosed.

GLOBAL BUSINESS

Target technology

virus validation and MCB/WCB characterization

Charles River Laboratories and Medigen Vaccine Biologics Corp. (MVC) are collaborating on the characterization and validation of MVC's virus seed bank for a next-generation multivalent enterovirus vaccine. Charles River will use next-generation sequencing (NGS), including cGMP NGS testing, to support pathogen detection, genetic characterization, and quality and safety assessment. The collaboration is intended to accelerate high-quality vaccine development, strengthen global regulatory readiness, reduce animal testing, and maintain the analytical accuracy and reliability required by regulators.

GLOBAL BUSINESS

Target item

cathode material lithium hydroxide/carbonate

In the second quarter of 2026, Albemarle reported sales of lithium salts, including lithium hydroxide and lithium carbonate, together with spodumene on a lithium carbonate equivalent (LCE) basis. Energy Storage revenue reached \$1.3 billion, up 78% year over year, driven by higher lithium pricing, while adjusted EBITDA increased to \$723 million. Company-wide revenue rose 31% to \$1.7 billion, indicating that pricing and market conditions for lithium materials continued to support performance.

GLOBAL BUSINESS

Target item

robot LiDAR

GUSS Automation, a John Deere subsidiary, plans to integrate Ouster's Rev8 OS0 native-color digital lidar sensors, powered by L4 Ouster Silicon, into its next-generation autonomous orchard fleet. High-value crop environments require additional perception capabilities because conventional GPS may not provide the centimeter-level accuracy needed for safe navigation. The lidar's ultra-wide field of view and dense 3D point-cloud data support driverless sprayers in mapping tree trunks, crop rows, and ground contours. The integration is intended to improve precision and operating capabilities in complex outdoor agricultural environments.

GLOBAL BUSINESS

 Target technology

rare earth extraction from end-of-life permanent magnets

Mkango Resources has completed the €8 million acquisition of Remloy, a rare earth magnet recycling business from Heraeus Amloy Technologies GmbH. Remloy operates a plant in Bitterfeld, Germany, that uses a melting-based medium-loop process to recycle end-of-life rare earth magnets into neodymium-iron-boron (NdFeB) alloy powders for bonded and hot-deformed magnet markets. The process complements HyProMag’s short-loop recycling technology for producing sintered magnets and Mkango Rare Earths UK’s long-loop process for producing mixed rare earth carbonates and oxides.
