GLOBAL BUSINESS STATUS

Target item/tech

Gene/cell therapy delivery vector and GMP raw material

Moderna announced initial results from a study of an experimental mRNA cancer treatment that would be the first of its kind if approved by regulators. The treatment involves an mRNA-based cancer vaccine called intismeran tailored to individual patients' tumor mutations, paired with Merck's Keytruda for melanoma patients. The study showed that patients who received the combination lived longer without cancer returning or metastasizing compared to those who received Keytruda alone.
